## **German Business Exchange Entrepreneurs Magazine Recognizes Quorum AI Alongside International Business Titans Embracing Artificial Intelligence**

**Founder Noah Schwartz Profiled With Global CEOs, AI Thought Leaders**

SAN FRANCISCO – Quorum AI was recognized today as one of the top thirteen global companies that are leading the revolution in Artificial Intelligence. DUB ENTREPRENEURS Magazine, through the German Business Exchange – the largest independent marketplace for the purchase and sale of companies in German-speaking areas, profiled executives at global leaders in technology, finance, retail, telecommunications and automotive fields who are using Artificial Intelligence to transform their industries.

Schwartz discusses with DUB how AI will change traditional industries beyond mere automation and analytical insights by personalizing the AI to the individual. He notes that, "the intelligent car can do more than just drive, it can turn the passenger into a potential consumer [for any goods or services that the car manufacturer wants to deliver]."

Quorum AI is considered to be at the forefront of personalized AI because of its core technology, the Engram AI Engine. Engram is a self-training AI system that learns in realtime as data is being received. This efficiency shortens the time between data collection and actionable insight, enabling the AI to be more personal and more reactive.

"AI is going to be transformative in ways that go beyond existing industries and enterprises," said Schwartz. "The future of AI is about holistic, seamless integration of life and technology, not just automating things we already do. We are building our platform with that future in mind to gain a headstart on what's over the AI horizon."
